

14TH NATIONAL RETROSYNTHESIS COMPETITION 2026

COMPETITION DETAILS

Please find below further details of the 14th National Retrosynthesis Competition 2027

IMPORTANT: Only a retrosynthesis is to be submitted for the first-round molecule (NOT a forward synthesis)

Timescale:

Entries to be submitted to the SCI conference team (conferences@soci.org) no later than 17:00 (GMT) on **Friday 4 December 2026**

NB Entries submitted after this time will not be judged

The judging panel will select a **maximum** of 10 entries to progress to the second round

Teams selected to participate in the second round will be notified by Friday 15 January 2027

Second round teams will present at the final on Friday 12 March 2027

Venue

The final will be held at GSK in Stevenage on Friday 12 March 2027, 10:30 – 17:00 (GMT).

Travel details:

Registration to attend will open in January 2027 and will be on a first come-first served basis. Limited priority will be given to supporters of the team's presenting at the final.

Whilst we aim to keep the event free to attend, if the competition is deemed not financially sustainable to take place, we reserve the right to include a small delegate fee for all attendees. For further information, see contact details below. Travel and/or accommodation expenses will not be provided, a limited number of travel bursaries may be available via the SCI and RSC, these are intended for non-industry entrants and will be on a first come-first served basis.

Team Information

Size

It is recommended that each team consists of no more than 8 people; however, a **maximum of 4** people will be allowed to present at the final.

Age / Team Composition

Based on feedback from previous events and to open the event to a wider audience, there will be no age limit to enter the 2027 competition: however, the Organising Committee would like to stress that the spirit of the competition is to showcase the skills of **early career chemists** within the UK and Ireland. The teams should aim to maximise the participation of these individuals and use more experienced team members' knowledge to facilitate discussion and contribute to proposals. The Organising Committee also promotes and values diversity within the teams.

Institutions / Companies / Universities

Teams can originate from a single company / institution / university with cross departmental teams encouraged: however, team members are restricted to contributing to only one entry. Joint entries are also encouraged although this must be made clear to the Organising Committee and judges at the time of submission. This competition is currently limited to entrants from the UK and Ireland.

Competition Details:

Judging Criteria

The presentations/entries will be judged on the following factors which are applicable independent of the molecule:

- Elegance of disconnections and synthesis, in particular the application of existing chemistry to new problems
- Feasibility of route, to include literature precedence for non-trivial steps – a high degree of probability of success is essential
- Conciseness of synthesis from readily available inexpensive (ideally <£10/g) precursors
- Presentation to be concise, clear, and logical.

While demonstrating a high probability of success for new transformations and new chemistry might appear challenging, teams are encouraged to address this by, for example, (a) showing that competing pathways have been identified and why the desired pathway is deemed most likely, and/or (b) showing how their design is flexible

enough to accommodate contingency routes. At the same time, care should be taken to avoid close following of multiple-step sequences from published literature as this is likely to diminish the points of difference between entries.

Each entry will be assessed by two members of the judging panel to ensure impartiality. In the event that two judges cannot make a selection, then the other two judges will be asked for their opinion and a decision made.

Research Discovery Applications/Chemistry Information Tools/Search Engines

All proposed chemical routes must be substantiated by sound chemical reasoning and literature references. No hypothetical chemistry transformations should be included.

Use of applications such as SciFinder and Reaxys are encouraged.

Computational Modelling

Computational modelling may be used to support ideas/theories/proof of concept but it will be considered a part of a chemist's toolkit, and extra points will not be awarded for using it. If computational modelling is used, as with any other tool, teams must be prepared to respond in-depth questioning.

Feedback may be requested after the first-round decision-making process; however, depending on the number of entries received, it may not be possible to respond to all entrants.

Specific Criteria for Initial Submission

IMPORTANT: Only a retrosynthesis is to be submitted (NOT a forward synthesis)

The template provided on the website **must** be used for all competition submissions for the first round and adhere to the key points below:

Length

- The presentation must be a **maximum** of 10 pages.

The title page must contain: team name

names of team members

company or institution(s) represented

A maximum of 8 pages for the retrosynthesis of the molecule

The final page should contain references. Where possible, please include doi links.

Formatting

- Please save your submission file as “**Company/University Name – Team Name**”

Structures should be drawn using one of the following programmes and styles:

ChemDraw - ACS 1996

ISIS – JACS or JOC settings

Symyx draw - ACS Document

Criteria for Final round submission

IMPORTANT: A forward synthesis should be presented if you are selected for the final (a short retrosynthesis may be part of your presentation)

There are no restrictions to the format or content for the final but all presentations will be strictly limited to 15 minutes. The judging panel will take presentation style and content into account, so it is recommended that the chemical formatting mentioned above or similar is maintained. Key steps of the retrosynthesis may be presented, but the focus of the presentation should be on the forward synthesis. **Back-up information not included in the main presentation should be limited to a maximum of 10 slides.**

Chemistry Schemes

All forward synthesis must contain proposed:

- Reagents
- Solvents
- Yields (based on sound literature references where possible)
- Enantiomeric Excess (based on sound literature references where possible)
- Bullet points should be used to describe key points

Judging Criteria

All of the criteria for round one with the addition of verbal presentation/communication skills both during the presentation itself and answering the questions, as well as demonstrating a depth of chemistry when answering questions from the audience.

Copyright

- The submitted reaction schemes will not be kept confidential, and in entering the competition and accepting the T&C, the group submitting the scheme agrees and consent to the same.
- Any IP rights that subsist in the submitted materials must not infringe the rights of any third parties.

Both SCI and RSC own a worldwide, non-exclusive right to: Publish any reaction schemes submitted to SCI in any medium whatsoever.

Modify and publish any reaction schemes submitted to SCI in any medium whatsoever.

Publish any presentations submitted to SCI in any medium whatsoever, including live streaming the event.

Any other specific items or documents submitted to SCI for the purpose of the competition may also be published, these items should be treated in the same way

Unless formally agreed with the SCI or the Competition Organising Committee, the details of the authors and their affiliations (as the authors) shall be published

Further Information

For further information or questions, please contact Rob Davidson (robert.davidson@pfizer.com) or the SCI's Conference Team: conferences@soci.org
